Given:

Example problem 4.9 in the text with the following changes:
1. The location is College Station (use latitude = 33°)
2. The crop is corn
3. Average monthly temperatures for College Station are:
   a. June = 80.1°F
   b. July = 85.2°F
   c. August = 86.0°F
   d. September = 79.8°F

Required:

Estimate the evapotranspiration from corn grown in College Station during June, July, August and September using the Blaney-Criddle method.
